

Course on Human values and Professional Ethics

Clinical Research Course is conducted in the college for final year B.Pharm & M.Pharm students. It helps to impart quality education to students looking for a career within the industry. Clinical trials are systematic investigations in human subjects intended to gather safety and efficacy data of a new drug. The clinical trials conducted all over the world follow universally accepted guidelines and regulations. These trials for new drugs are conducted on human subjects or patients only after abundant satisfactory information has been collected on its quality and safety through pre-clinical studies and which have an approval from the required health and ethical authorities. Designed to turn Life Sciences graduates into well-rounded, thinking individuals who will add value to the companies who hire them. It is our aim to increase the pool of bright, enthusiastic and knowledgeable students who will enter the healthcare industry and make future even brighter. Certificates are provided to the students.
